

## ROSES – 2026

**Hybrid teas** are the most popular class of roses. They are tall, stately plants with large blooms. Most carry their flowers as singles on long stems suitable for cutting. In the landscape, hybrid teas are used as single specimens or as the featured plant in mixed beds of roses. The **grandifloras** produce clusters of flowers, generally on shorter stems than hybrid teas. They are a cross between hybrid tea roses and **floribunda** roses. Floribundas are generally more compact plants with clusters of roses on shorter stems. **Shrub roses** are a group of plants with compact shrub-like growth, a long blooming season, disease resistance, and low maintenance such as no deadheading or spraying needed. **Climbing roses** produce long canes that usually are trained to a fence or arbor. Some produce flowers on the previous season's growth and some bloom on both new and old wood.

### HYBRID TEA (HT) GRANDIFLORA (GR) FLORIBUNDA (FL)

#3 Ketchup & Mustard™ FL-----Red & Yellow Moderate fragrance Continuous bloom

#3 Rio Samba FL-----Orange & Yellow Fragrant Dis. Resistant Continuous bloom

### CLIMBING ROSES

Blaze Improved-----Red Fragrant Repeat bloomer Very hardy #3
